**This is product of SISAL workshop 5 – 28th February to 4th March 2022 – Jerusalem**

Document created by workshop participants

The following document is the wish-list for annotated sample scans to submitted to the database.

Provide as much of the following information as possible on/along with an annotated sample scan.

## Entity scan annotation: recommended fields

- length
- width
- 'Depth reference line for age-depth model' - line that has been used to determine depth of the analyses - e.g. stable isotopes could have been used to define the depth for the age-depth model and trace elements could have been aligned to that age-depth model along visible lamination
- U/Th sampling sites
- stable isotope sampling track
- trace element sampling track/s
- Thin section positions
- Non-annotated scan of the speleothem
